Mozzie Snail

The spiral mosquito coil forms the snail’s shell.

A$50

Inspired by a snail motoring along, Mozzie Snail turns a mosquito coil into its spiral shell. A shaped clip holds the coil upright, and a shallow dish formed into the body helps catch burnt fragments.

Cut and formed from 2 mm galvanised sheet steel.

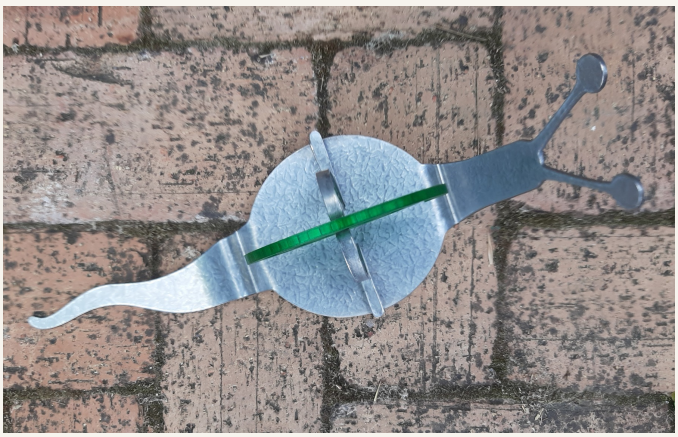

370 mm long × 125 mm wide × 145 mm high to the top of the antennae. Approx. 500 g (artist’s estimate).

A repeatable design in Thomas Westra’s range of small garden works.

Mozzie Snail from the side and above

From the side, the shaped clip and the dish beneath the coil are visible.

From above, the shallow dish is visible beneath the coil, where it helps catch burnt fragments.
